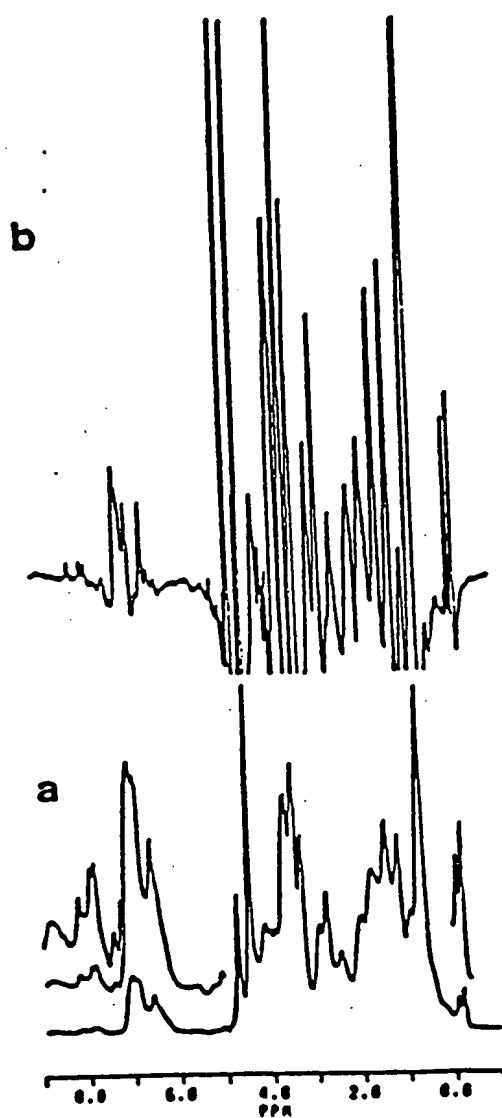

FIGURE 5

The spectrum displays a series of peaks and troughs. A prominent feature is a sharp, high-intensity peak at approximately -112.5 PPM. To its left, there is a cluster of smaller peaks between -111.0 and -112.0 PPM. To its right, the signal continues with several more peaks of varying intensity, including a notable one around -113.5 PPM and another around -114.5 PPM. The baseline is relatively flat outside of these peak regions.
